

UFO FLOTILLAS REACH ITALY

INTRODUCTION

I would like to bring to your attention one of the few “flotillas” case in Italy, occurred and filmed on March, 4 2008.

In the same article are described two other “flotilla” cases, both occurred in September 2007 at just 30 Km. distance from the most recent case of March.

The two witness living in Treviglio (BG) and Cinisello Balsamo (MI), two city in italy 30 Km. apart, are experiencing massive ufo activity since at least 10 years!

It's really incredible to me how those two cases undergo no visibility at all in this years. Se second witness, Antonio Urzi and his girlfriend Simona Sibilla, living in Cinisello Balsamo (MI), collected something like 2500 videos (!!!) of any known kind of ufo, from the metallic “Adamski” types, to the ball of light, ending with “flotillas”, filmed in recent activity over that zones.

The other witness, Giuseppe Garofalo, living in Treviglio (BG) had less sightings but has managed to take several clear videos himself in all those years, and the last one is the wonderful “flotilla” video shot on March, 4 2008.

I obtained from the witness permission to make an article on the subject, in particular on the latest “flotilla” cases, wich are very rare outside of South America, and also I obtained permission for you to publish this material on your site if you think it maybe be important.

Best wishes

Massimiliano Mattei – www.terninrete.it – www.ufologia.net

UFO FLOTILLAS REACH ITALY

Original article on: www.terninrete.it and www.ufologia.net at http://www.terninrete.it/headlines/articolo_view.asp?ARTICOLO_ID=120537

Witnesses filmed swarms of white spheres for over 45 minutes hovering in the Italian skies.

The ones that follow closely the ufo phenomenon, use to think of ufo “flotillas” as a peculiar show in South America, and this is confirmed by the fact that ufo researchers worldwide, keep referring to this particular kind of ufo event using the Spanish word “flotilla” (tr. little fleet).

But what are ufo “flotillas”? Simply put it's a swarm of UFOs, mostly white spheres, moving in formation and reaching even thousands of units in a single display, and are often translated in mass sightings, due to the huge size and time span of the sighting itself. Sometimes those “white spheres” just hover in a fixed formation moving slowly in the sky or just staying there for minutes, even hours, sometimes a few of them break formation

and change their pattern as if they wish to “communicate” somehow, resembling symbols or even constellations.

For some references, just take a look at the most famous “flotilla” cases reported and filmed in South America:

Guadalajara, June, 10 2004: http://it.youtube.com/watch?v=iKzzsM-_sg
Lima, May, 20 2007: <http://it.youtube.com/watch?v=AwJdxLsd-4k>

According to the climax that the ufo subject experienced since the start of 2008, both in media attention and in increased sightings, “flotillas” thought it was a good idea to make their surprising appearance outside of their “conventional boundaries”, reaching the shores of Italy.

The first sighting we report is the most recent as it occurred in Treviglio (BG) Italy on March, 4 2008 at around 4.56 pm, when Giuseppe Garofalo managed to film in really adverse weather conditions, a full “flotilla” display.

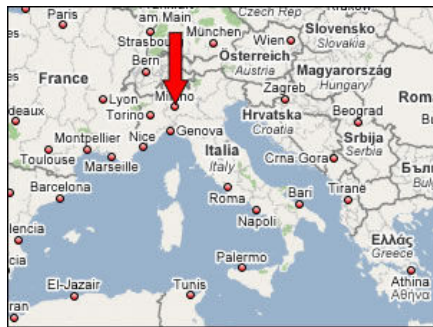

It’s not the first time that Giuseppe managed to film unusual objects in his surroundings but this is the very first time he managed to see and film a whole ufo fleet, a “classical flotilla” made up of white spheres changing formation as to form several symbols or as Giuseppe suggested, constellations, like Ursa Major / Ursa Minor or Lacerta.

The full video of the event is available here: <http://it.youtube.com/watch?v=rc3B--INGJ4>
Other sightings filmed by Giuseppe in the past are available here:
<http://it.youtube.com/user/Amydele>

There are many things to be noticed about this particular sighting. The first one is of course the “intelligent” behaviour of the display, common to all “flotillas”. The second one is that it’s a rare episode of a “flotilla” outside South America and the last one is the kind of “empathic” contact that the UFOs seem to have established with Giuseppe, considering the large number of sightings has experienced and managed to film.

But what really makes me wonder is that at about 30 km. in Cinisello Balsamo (MI) two other witness are having even more multiple and frequent sightings in the past years, including two massive “flotillas” display on September 23 and 30 of the past year 2007, lasting for over 45 minutes.

Those witness are Antonio Urzi and his girlfriend Simona Sibilla, who silently stored more than 2500 (!!) videos of any kind of alleged UFO display we are used to, ranging from the “classical” metallic flying saucers, to multicoloured balls of light, unidentified biological entities and finally “flotillas”.

You can watch asome of the videos from Antonio and Simona and in particular the “flotilla” video shot on September, 30 2007 at their website: www.contattomassivo.info

A typical “flotilla” with almost fixed formation can be clearly seen crossing the sky with a bigger object in the middle, just like in the Mexican case of Guadalajara, June, 10 2004: http://it.youtube.com/watch?v=iKzzsM- _sq

It’s really incredible how such a huge amount of high quality material has not yet come to the attention of the ufo community. That’s why the witness are now in contact with the well known ufo researcher Jaime Maussan and Italian researchers Piergiorgio Caria e Giorgio Bongiovanni who are willing to bring this case to the public attention.

We can only think about the “flotilla” appearance in Italy as a natural consequence of the surge in sightings and worldwide attention that we are experience from the start of the year.
